Index

Volume 34 Nos 1–12
January–December 1992

Items in italic are keywords taken from extracts of papers.

SUBJECT INDEX

A CASE tool for conceptual database design 779
A design environment for addressing architecture and compiler interactions 707
absorption 219
abstract data types 83, 485
active object-oriented databases 533
algorithms 175, 308
An expert decision support system for network routing: a case study 771
Application of cost-estimation techniques: industrial perspective 379
Approaches to deductive object-oriented databases 787
architectural design 707
architecture 813
ARISTA: knowledge engineering with scientific texts 611
automated test generation 523
automatic programming 593

blackboard 739
Boyce-Codd Normal Form 175
browse-and-edit-screens 219
business applications 219

CASE 117, 403
case study 443
Case study in human factors evaluation 443
CASE tools 403, 779
code generation 533
communicating sequential processes 543
communications software 383, 513
communications systems 383
Comparison of four design methods for real-time software development 74
computer architecture 707
computer science 185
computer-aided software engineering 117, 403
computer-aided software testing (CAST) 694
computer-supported cooperative work 437
compiler techniques 313
compilers 333
conceptual database modelling 779
conceptual modelling 255, 533
concurrency 313, 326
concurrency control 563
Concurrency control: adaptation of rax protocol for telecommunication systems 563
concurrent progamming 313
concurrent program testing 43
concurrent systems 313
configuration management 383
Consistency and standardization of user interfaces 397
constraints 147
coordination 437
cost estimation 178, 211, 379, 627
cost estimation models 211
costs 655
crossword compilation 16
Cryptic crossword clue interpreter 16

data abstraction 83
data analysis 681
data collection 640
data definition language 192
data engineering 97
data manipulation language 195
data modelling 219, 255, 787
data-driven design 219
database design 97
database integration 16
database management 175, 308, 427
database management systems 28, 159, 283, 363, 389
database systems 147
databases 3, 28, 147, 159, 175, 219, 255, 283, 308, 363, 389, 409, 563
dataflow diagrams 117
datalog 787
decision support systems 771
deductive databases 192, 787
Deductive-ER: deductive entity-relationship data model and its data language 192
deductive-ER model 192
defects 507
denotational semantics 543
design 603
design methods 74, 513
Designing parallel systems: a performance prediction problem 813
diagramming 139
Disciplined approach to real-time systems design 603
distributed artificial intelligence 739
distributed databases 16, 563
distributed program 523
Distributed shared-memory implementation for multitransputer systems 499
distributed shared-memory systems 499
distributed software 523
distributed statistical databases 363
distributed systems 185, 427
domain analysis 239
dynamic analysis 707
dynamic dataflow analysis 523
Dynamic method of test data generation for distributed software 523

effectiveness 731
efficiency 731
Efficient algorithm for BCNF-decomposition 308
empirical analysis 756
Empirical studies of assumptions that underlie cost-estimation models 211
Empirical study of software maintenance 507
enhanced-ER diagram 779
Enhancing software productivity through templating 593
entity modelling 804
Entity models to object models: object oriented analysis and database design 255
entity relationship 97
entity-relationship model 192
estimating 655
evaluation 443
Experimental-analytic approach to derive software performance 229
Experiment on coordination within software development teams 437
expert systems 250, 739
extensible languages 333

failure/fault classification 640
Failures, faults and changes in dependability measurement 640
file systems 185
Forced transformation of Occam programs 91
Formal approach to hypetext system based on object-oriented database system 573
formal description techniques 513
Formal description techniques and automated protocol synthesis 513
formal method 573
formal model 326
formal specification 139
formalization 57
Formalization of techniques: chopping down the methodology jungle 57
formation rules 117
frame representation 467
Frame representation for specification of timing constraints in real-time systems 467
Framework for query optimization in distributed statistical databases 363
From screen forms to RDM and from RDM to screen forms 219
Functional approach to mathematical model of naming 185
functional dependency 175, 308
function points 655

Generating diagram editors from formal specifications 139
granular requirement 485
graphical user interface 721
graphs 355

heuristics 771
hierarchical 159
Hierarchical framework for modelling transaction flow in multiple-access DBMS topology 389
human factors 3, 443
Human factors study of two screen-oriented query languages: STBE and QBE 3
human–computer interaction 443
human–computer interface 397
hypertext 573

Implications of sensitivity in Bayesian approximate reasoning for expert systems 250

Index

imprecise computation 263
Industrial applications of software measurement 681
information systems 57, 83
information technology 341
interpreters 453
IPSEs 283
IT 341
IT consultancy 341
IT consultants — source of expertise or expense? 341

Jackson System Development 543

key performance indicators 731
knowledge engineering 611
knowledge representation 611
knowledge-based systems 250

Lisp 478
logical design 175, 308
Long-term controlling of software reuse 178

maintenance 507
mapping 97
MDAS: heterogeneous distributed database management system 28
Method to determine existence of perfect BCNF decomposition 175
methodology 159
Methodology for schema translation from heirarchical or network into relational 159
methodologies 57
methods 106, 355
Measuring the structure and size of software design 756
metrics 507, 674, 756
modelling 313
models 185
multimedia 427
multitransputer architectures 499
multi-processor architectures 739

naming systems 185
natural language processing 611
network schema 159
networks 159, 771
normal forms 175, 308
normalization 219

object domain 485
object management 427
object models 427
object orientation 255
object-based analysis 355
Object-based system analysis of real-time systems through application of universe-of-discourse graphs with top-level object identification 355
object-oriented 255, 283
object-oriented analysis 255
object-oriented database systems 147, 427, 721
object-oriented databases 192, 573, 787
Object-oriented databases support for software project management: data-modelling issues 283
object-oriented design 219, 485
objects 485
Occam 91
On rules and integrity constraints in database systems 147
On the implementation issues of a parallel expert system 739
optimization 263
orthophrase extensibility 333
Orthophrase extensibility in Galaxy 333
Overview of PVC-M 383
Overview of reverse engineering and reuse research 239

parallel process syncronization 499
parallel processing 739
parallel programming 499
parallel Prolog 453
parallel systems 813
parallelism 91, 453
Pascal 478
path analysis testing 43
Path analysis testing of concurrent programs 43
performance analysis 229
performance evaluation 389, 813
persistent programming 533
physical database design 804
practical application 681
preventive structural analysis 117
priority 409
productivity 211, 731
Products, processes and metrics 674
program design 83, 106
program translation 478
programming in the large 659
programming in the many 659
programming in the small 659
programming languages 16, 83, 91, 333, 478
project control 627
prolog 453, 787
Preventive structural analysis of dataflow diagrams 117
prototype 97
prototyping 313, 409
PSM: software tool for simulating prototyping, and monitoring of multiprocessor systems 313

quality assurance 694
query languages 3
query optimization 363
queueing network models 389

real-time 603
real-time problem solving 739
real-time software development 74
real-time systems 409, 467
real-time transactions 563
re-engineering 239
relational 159
relational databases 97, 175, 804
remote database access 389
requirement statements 485
Requirements organization approach for object-based construction of software systems 485
reusability 593
reuse 239
Reverse data engineering technology for visual database design 97
reverse engineering 159, 239
Rigorous approach for representation and measurement of structural properties of concurrent computer programs 326
rules 147

schema 97, 139, 175
semantic data modelling 192
semantic integrity 533
Semantic integrity for persistent objects 533
semantics 16
Scheduling real-time transactions using priority 409
scientific and statistical databases 3
simulation 313
software 627
Software cost estimation 627
software cost estimation 211
software cost estimation model 627
software dependability assessment 640
software design 106, 229, 485, 674, 756
software development 74, 178, 437
software economics 178
software engineering 139, 326, 756
software engineering environments 283, 659
software integrated circuits 403
Software integrated circuits and computer-aided engineering tools 403
software measurement 326
software metrics 379, 681
software models 756
software performance 279
software process 437
software process models 674
software productivity 593
Software productivity metrics — who needs them? 731
software quality assurance 443
software reuse 175, 659
software testing 43, 523, 694
software tools 139, 313
special-purpose applications 333
special-purpose compilers 333
specifications 83, 467, 603
standards 397
State of art and open issues on graphical under interfaces for object-oriented database systems 721
statistical databases 363
Strange bedfellows: abstract data types and dBaseIII 83
structural analysis 117
structured analysis 117
sub-schema transformation 219
Successful experience of using function points to estimate projects costs early in the life-cycle 655
synchronization 409
syntax-directed editors 139
synthesis 513
system architecture 756
system analysis 355
system design 263
system development 355, 443
system multiprogramming level 389

task scheduling 263
teamwork 437
telecommunications 379
telecommunication systems 383, 563
test data generation 523
Testing and quality assurance — the future 694
Theoretical basis for Jackson System Development 543
theory 175
timing constraints 467
tools 97
Tools and environments to improve the software process 659
transaction 409
transaction flow 389
translation 159
Translation of Pascal programs for execution on Lisp-based machines 478
Transformational approach to software design 106
transformations 91, 106
transputers 453, 499
Transputer-based implementation and evaluation of parallel Prolog interpreter 453

uncertainty 250
Unix 185
usability 443
user interface 397
User-controlled optimization task scheduling for imprecise computer systems 263
user-interface design 397
user-interface standards 397
Using an entity model to drive physical database design 804

value of IT 731
validation 43
visual languages 139
visual programming 721

workload mix 389

Zenith system for object management in distributed multimedia design environments 427
